

Front Bumper Registration Plate *by NPC73*

Here is a simple DIY guide to securely fit your registration plate to your front bumper more securely.

I have used a nut and bolt combination, together with a 3mm aluminium plate at the rear of the bumper.

Remove the existing clips from the bumper. Attached your nuts and bolts as per the pictures below

Please Note: Some X-Trail bumpers have extra foam material at the rear of the bumper. In this case you will need to drill a small hole through the foam to allow your bolt to go through. You will also require a longer bolt as well so please make allowances for this.
